

Paradigm Pet Professionals Redesign

<https://harrison-mueller.github.io/certification-coursework-pet-professionals/>

I remade and improved the provided example site according to the simulated client's specifications and best user experience practices. Prototyping began with discovery and written description of the original site's issues, then I created a wireframe mockup of the new site and finally created the site according to the design using HTML and CSS.

- HTML
- CSS
- User Experience

US State Site

<https://harrison-mueller.github.io/certification-coursework-arizona-site/>

I made a webpage from scratch according to assignment specifications. Requirements included a header with navigation bar, multiple pages, properly positioned aside elements, and form validation.

- HTML
- CSS
- Javascript

Vacation Shop Backend

I completed a functional Spring backend for a vacation purchasing application. This included creating appropriate data structures according to provided UML and ERD diagrams and code to save and register different excursions as well as bootstrap the database with starting data.

- Java
- Data Structures

Product Inventory Backend

I completed a functional Spring backend for a shop inventory application. This included tracking

products as well as the parts required to assemble those products.
